工具 1：命名实体识别

```python
@mcp.tool
def named_entity_recognition(text: Annotated[str, "Text to perform NER on"]):
    """Performs Named Entity Recognition using external NLP API."""
    response = client.completions.create(model="qwen-max", prompt=text)
    return response.outputs[0].text
```

工具 2：根据输入的动物名称，获取动物信息

```python
@mcp.tool
def get_animal_info(animal_name: Annotated[str, "Name of the animal, e.g., 'panda', '大熊猫', 'lion'"]):
    """Retrieves information about a given animal."""
    try:
        return requests.get(
            f"https://zh.wikipedia.org/api/rest_v1/page/summary/{animal_name}").json()
    except:
        return []
```

工具 3：根据输入的行星名称，获取行星信息

```python
@mcp.tool
def get_planet_info(planet_name: Annotated[str, "Name of the planet, e.g., 'earth', 'venus', 'mars'"]):
    """Retrieves information about a given planet."""
    try:
        return requests.get(
            f"https://api.le-systeme-solaire.net/rest/bodies/{planet_name.lower()}").json()
    except:
        return []
```

earth

The Earth is the third planet from the Sun and the only known celestial body to harbor life. It is approximately 4.54 billion years old and has a unique combination of conditions that support life, including liquid water, a breathable atmosphere rich in oxygen, and a stable climate.

Key facts about Earth:

- **Diameter**: About 12,742 kilometers (7,918 miles) at the equator.
- **Circumference**: Roughly 40,075 kilometers (24,901 miles) around the equator.
- **Mass**: Approximately 5.97×10^{24} kilograms.
- **Orbit**: Takes about 365.25 days to complete one orbit around the Sun (a year).
- **Rotation**: Completes one full rotation on its axis every 24 hours (a day).
- **Moons**: Earth has one natural satellite—**the Moon**, which plays a key role in stabilizing Earth's axial tilt and influencing tides.

Earth's surface is composed of about 71% water and 29% land, with continents and oceans shaping diverse ecosystems.

It is part of the **Solar System**, located within the **Milky Way galaxy**, which is just one of billions of galaxies in the observable universe.
